## DETAILED ACTION

### *Allowable Subject Matter*

1. **Claims 1-4 and 6** (renumbered *claims 1-5*) are allowed.
2. The following is an examiner's statement of reasons for allowance: None of the references used singularly or in combination teach or fairly suggest an integrated circuit for a liquid crystal display comprising an internal clock generating circuit for generating a plurality of internal clock signals sequentially delayed from one another and data latch circuitry for receiving a plurality of display data signals corresponding to a display data input signal and outputting the plurality of display data signals each sequentially delayed in accordance with the plurality of internal clock signals, wherein points of changing the plurality of display data signals with respect to a time base are set with time delays that lag one another during one period of the internal clock signal. While Fujisawa et al. (U.S. Patent No. 5,038,139) and Jeong et al. (U.S. Patent No. 6,144,242) teach the limitations of the claimed subject matter, there fails to be motivation to combine the references. Specifically by combining Jeong et al. with the teachings of Fujisawa et al. the device of Fujisawa et al. renders the references unsatisfactory for its intended purpose. Also with reference to **claims 2 and 6**, neither of the references teach that the time delays are delayed from an active edge of the clock output signal by 0.5 period, 1 period, and 1.5 period of the data input signal. None of the other cited references make up for the deficiencies of Fujisawa et al. and Jeong et al.
